

Southern Technologies

"Providing expert consulting, applications, and technical services for your business systems."

Archive & Accelerate Your System!

Introducing a new, user friendly way to archive older transactions and accelerate the performance of your Agilisys[®] ERP system.

As your ERP database grows in size, ArcXcel[®] database archiving tool provides the expert solution for removal and storage of historical data. Use ArcXcel[®] to reverse the trend of slowing performance and get you system back on the fast track. Enjoy increased employee productivity from faster response time, quicker backups and restores, and more efficient use of limited disk space.

Using a user friendly graphical interface, simply specify the business rules for the data archive and ArcXcel[®] will generate an archive plan that lists all tables to be included in the archive, the number of rows to be archived, and the total database reduction in megabytes.
